

LET'S DO THE GROUNDWORK.

When it comes down to petroleum-impacted soil and sediment, BioWest Remediation covers some serious ground. Partner with us for wide-ranging remediation expertise and solutions, especially for industrial and commercial fields.

Soil Remediation and Landfarm Services

Based in Northeast Wyoming, BioWest Remediation is a soil remediation and landfarm company dedicated to delivering advanced treatment technologies and cost-effective solutions to soil contamination problems.

Partner with us for wide-ranging soil remediation solutions and landfarm technologies.

● Landfarm

An effective solution.

The natural solution for soil remediation, BioWest's landfarm is one of the most effective and straight forward ways to treat and remediate petroleum-contaminated soils and sediments. We utilize tested and proven landfarming methods and our own proprietary blend of soil nutrients and hydrocarbon-degrading bacteria in order to foster natural biodegradation of non-hazardous petroleum contaminants.

● On-Site Remediation Services

Treating on-site just makes sense.

By employing landfarming technology, bioremediation processes, BioWest's on-site remediation service is a cost-effective alternative so you can avoid the fees and trouble of disposal or transport. We provide a complete assessment of each site to identify the treatment method to maximize project efficiency and lower overall costs. Treating on-site reduces the overall footprint, takes advantage of natural processes and is a cost-effective solution.

● Trucking and Hauling

We offer trucking and hauling services to back you up.

BioWest Remediation can quickly, safely and cost-effectively mobilize the needed personnel, equipment and supplies required to the attack large and small projects, including diesel or gas contaminated sand, gravel, rock, soil and drill cuttings. We also manage cleanup operations by transporting contaminated soils to the BioWest landfarm facility and replacing it with new soil.

● Reclaimed Fill Dirt

Reclaim. Reuse. Cover more ground with BioWest.

A variety of industries—from construction to power operations to municipal and city organizations can get a ton out of reclaimed soil, gravel and rock. Treated according to state and federal environmental guidelines, BioWest's reclaimed soil can be used in a wide variety of applications, like backfill for production sites or cover dirt for landfills.

OUR FORMULA FOR YOUR SUCCESS.

At BioWest Remediation, we employ a unique formula to ensure success. We utilize landfarming technology, bioremediation practices, and our own proprietary blend of microbes to treat and remediate petroleum contaminated soils and sediments. We combine this technical expertise with practical field application and soil management experience to tackle the most difficult and wide variety of remediation problems.

● Meeting Environmental Guidelines

At BioWest Remediation, we strive to provide the highest level of quality service and environmental stewardship. Our commercial landfarm facility is permitted with the Wyoming Department of Environmental Quality. Our processes and policies follow the guidelines and regulatory processes set forth by both state regulatory bodies and the Environmental Protection Agency.

● Here For You

Strategically located in NE Wyoming with easy access from I-90, Hwy 16 and Hwy 116, BioWest covers more ground near active oil production and activity. Choose BioWest for far-reaching remediation solutions that come right on time and on price.
